Direction for questions 37 to 40: Read the passage below and solve the questions based on it.
It is difficult to compare countries because various factors such as size, Culture, History, Geography, natural endowments, geopolitics and internal polity comes into play. There are some goals which can be achieved by smaller countries; but sometimes smaller countries find it difficult to embark upon certain big technological plans even if they have the funds, because the size of the domestic market is too small. If we consider the bigger countries, the closest comparison to India is China, though there are many crucial differences.
The Chinese vision is to prepare the county for entry into the ranks of mid-level developed nations by the middle of the twenty-first century. Acceleration of his nation's economic growth and social development by relying on advances in science and technology is

pivotal in this.
Documents describing the Chinese vision state that science and technology constitute premier productive forces and represent a great revolutionary power that can propel economic and social development. It is interesting to note that the main lessons the Chinese have drawn from their past performance is their failure to promote science and technology as strategic tools for empowerment. They also point to the absence of mechanisms and motivations in their economic activity to promote dependences on science and technology. Similarly, they hold that their scientific and technological efforts were not oriented. They conclude that a large number of achievements were not converted into productive forces as they were too far removed from China's immediate economic and social needs. The Chinese vision is therefore aimed at exploiting state-of-art science and technology to enhance the nation's overall power and strength, to improve the people's living standards, to focus on resolving problems encountered in large-scale industrial and agricultural production and to effectively control and alleviate pressures brought on by population resources and the environment. By the year 2000, China had aimed at bringing the main industrial sectors up to the technological levels achieved by the developed countries in the 1970s or 80s and by 2020 to the level they would have attained by the early twenty-first century. The aim is to bridge an overall gap with the advanced world. There is a special emphasis on research and development of high technologies that would find defense applications. Some of these technologies are critical for improving the features of key conventional weapons. Some technologies are meant for enhancing future military capabilities. Other efforts are aimed at maintaining the momentum to develop capabilities for cutting-edge defense technologies. They call for defense technologies. They call for unremitting efforts in this regard with the aim of maintaining effective self defense and nuclear deterrent capabilities and to enable parity in defense, science and technology with the advanced world.

Read the passage given below and answer the questions that follow.
Read the passage and answer the questions that follow.

Sticky, gooey, oftentimes orange, and homemade within the ears - earwax is considered a gross nuisance that people tend to frequently remove and clean from the body. Whether it's by cotton swab, an ill-advised and__method, or by an otolaryngologist, people go to great lengths for unobstructed ear canals—but is removing earwax a good idea? Why does our body produce earwax in the first place if we just remove it in the end?

Earwax, also known by the formal name cerumen, is made from a mixture of long-chain fatty acids, alcohols, cholesterol, and the chemical compound squalene. It's secreted by glands in the outer ear canal in order to block dust, bacteria, insects, and other outside agents from infiltrating the ear canal and damaging the skin in the outer ear and the sensitive inner ear. While it's incredibly beneficial to the health of the ear, overproduction can cause earwax impaction, blocking sound waves from reaching the eardrum. Use of cotton swabs to clean excessive earwax can lead to further problems, pushing the wax farther into the inner ear canal rather than drawing it out. This has the potential to cause permanent damage to the eardrum and hearing abilities.
